FOR WHOM MARE'S MILK IS SUITABLE?

1. FOR INFANTS AND KIDS

Nowadays, the problem of baby food, in particular of high-grade breast milk substitutes, is extremely acute. Since almost a third of infants from the first days of life need additional nutrition and be on mixed or fully transferred to artificial feeding. At the same time, today all fermented milk products for baby food are made on the basis of cow's milk, which often have allergic reactions in children.

In terms of its unique natural composition, mare's milk is strikingly similar to human milk. The uniqueness of this product lies in the chemical composition of the mare's milk.

Mare's milk has a high biological and nutritional value, since the proteins and fat contained in it are well absorbed. Mare's milk contains a high level of polyunsaturated fatty acids and linolenic acid of the omega-3 family and has an immunostimulating effect.

Proteins are well balanced in amino acid composition, there is no allergic reaction to it. In pediatrics, almost all specialists in the organization of baby food have unanimously recognized the need to introduce complementary foods into the diet, regardless of the presence of a child, both on natural and artificial feeding.

PRODUCTION PROCESS

2.MILK COOLING

Temperature of the mare's milk +4°C

3.PASTEURIZATION

Gentle pasteurization +72°C (15sec)

4.MARE'S MILK COOLING

Temperature of the mare's milk +4°C
